

AKSHITA CHANDRASHEKAR

Product Designer · Enterprise & Platform UX

Bangalore, India | +91 9844056562 | info.akshitac@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

A product designer with 8 years of experience designing B2B and enterprise software across Retail & E-commerce, Healthcare, and Kubernetes ecosystems. Skilled at translating data-dense workflows, legacy applications and technical systems into intuitive, scalable experiences. Experienced in end-to-end product design, from research and product definition through interaction design, prototyping, and engineering delivery, with measurable impact on operational efficiency and business outcomes.

CORE COMPETENCIES

Product Design & Strategy	End-to-end product vision · Design strategy · Design systems
Complex Systems & Platforms	Enterprise UX · Data-dense applications · Developer tools · Admin experiences
Research & Insights	Generative research · Usability testing · Qualitative & quantitative research · A/B testing
Other Design Skills	Figma, high-fidelity prototyping, interaction design, visual polish, design documentation
Collaboration & Leadership	Cross-functional leadership · PM & engineering partnership · Design advocacy · Accessibility · Design documentation

EXPERIENCE

User Experience Designer | **Everpure (formerly Pure Storage)** | Bangalore, India, Jan 2025 – Present

Lead designer across three enterprise platform product areas, driving design vision, research strategy, and cross-functional execution for Kubernetes-native infrastructure tools used by storage engineers and platform operators at scale.

End-to-End Design Ownership & Vision

- Owned the full design lifecycle for Kube Datastores (KDS): from generative research with VMware administrators transitioning to Kubernetes, through concept definition, information architecture, interaction design, and handoff to engineering across OCP UI plugin and SDK layers.
- Led design for PX Central platform overhaul that included the spec generation and, onboarding journeys, and navigation redesign, thus converting complex YAML configuration into guided, form-based UI with contextual validation, reducing administrator onboarding friction significantly, successfully reducing friction during onboarding by focusing on user intent rather than product intent.
- Established a clear CLI UX framework and guidelines standardizing verb taxonomy, command structure, and output formatting by reviewing and unifying over **210+ existing commands**, across all Portworx CLI surfaces, demonstrating systems thinking and design leadership across both UI and non-traditional surfaces.

Research & Collaboration

- Led user research with VMware platforms such as VMFS to understand migration anxiety and decision friction; translated qualitative findings into a self-serve, paved-path experience that required no prior knowledge of PX.
- Partnered directly with PMs, architects, and frontend/backend engineers across multiple review cycles; collaborated closely with CLI engineering team to align design decisions with implementation constraints.

- Authored quarterly UX newsletters for the engineering org communicating product improvements, strategy, and feature walkthroughs, building design culture and shared understanding across the organization.

User Experience Designer | Walmart Global Tech | Bangalore, India | May 2022 – Jan 2025

Designed enterprise-scale internal platforms serving developers, business analysts, and SRE teams — including high-impact cataloguing, anomaly detection, and performance tools used across Walmart's global operations.

- Spearheaded UX design for Walmart's cataloguing platform, influencing **6,900+ product types, 120,000+ attributes, and 4.3 billion catalogue items**, which required deep information architecture and systems thinking for data-dense admin interfaces directly analogous to CRM data management at scale.
- Designed an anomaly detection platform for business operations enabling real-time signal monitoring across marketing and sales data streams; associated **GMV benefit exceeded \$151M**, demonstrating direct business impact from design-led product decisions.
- Redesigned a high-traffic SRE performance testing tool (**15+ teams, 300+ daily requests**) and transformed a complex developer workflow into a clear, navigable interface with actionable status signals, improving user productivity and team throughput.
- Built a shared sub-design system adopted across **10+ platforms**, reducing design time by **30%** through reusable, consistent component patterns, thus demonstrating design leadership and scalable systems thinking.
- Managed a portfolio of **7 concurrent design initiatives**, consistently delivering high-quality work on time across cross-functional PM and engineering partnerships.

User Experience Designer | Indegene India Private Ltd. | Bangalore, India | Aug 2021 – May 2022

- Designed and streamlined workflows for healthcare marketing tools, producing **20+ campaign assets** and improving usability for pharmaceutical marketing clients with domain experience adjacent to advertising and marketing technology.
- Led research to enhance the grid system within Indegene's design framework, reducing design time by **15% across 5+ projects**.
- Established regular stakeholder communication cadences across product, marketing, and engineering, **reducing feedback loops by approximately 60%**.

Application Development Associate | Accenture | Bangalore, India | Aug 2018 – Jan 2020

- Resolved **32+ complex software issues** across global lab informatics platforms spanning Netherlands, South America, and Korea and built technical fluency and cross-functional collaboration habits foundational to design-engineering partnership.

EDUCATION

Bachelor of Engineering - Information Science, 2014 – 2018

Ramaiah Institute of Technology, Bangalore
